

## Acute Inpatient Rehabilitation Unit

### Brain Injury Rehabilitation

Early rehabilitation is a critical factor in helping patients with brain injuries achieve their fullest potential. At the Riverside Acute Inpatient Rehabilitation Unit, we understand the importance of that early intervention in improving each patient's healing process. Our individualized "pathways to recovery" includes a series of rehabilitation steps to meet each person's goals and needs.

Our treatment program features a team of rehabilitation specialists to guide patients along an individualized treatment path designed to maximize functional independence and reduce the risk of future health problems. Patients and their families become important members of our brain injury rehabilitation team, and the plan of care is closely integrated into each patient's life-style.

#### Rehabilitation Objectives

- Improve swallowing abilities
- Improve thinking abilities
- Improve communication
- Improve visual perception
- Improve balance, coordination, strength and endurance
- Facilitate emotional adjustments to any life-style changes for patient and family
