

Acute Inpatient Rehabilitation Unit

Orthopedic Rehabilitation

At the Riverside Acute Inpatient Rehabilitation Unit, we have developed a series of rehabilitation steps to help patients achieve functional gains in a timely manner. This individualized “pathway to recovery” is geared to each patient’s need and the extent of his or her injury, whether it is a joint replacement, neck or lower back disorder, or another orthopedic complication.

Our treatment program features a team of rehabilitation specialists to guide patients along an individualized treatment path. We strive to maximize functional independence and reduce the risk of future health problems. Patients and their families become important members of our orthopedic rehabilitation team, and the plan of care is closely integrated into each patient’s life-style.

Rehabilitation Objectives

- Improve balance, coordination, strength and endurance
- Reduce limitations of mobility and self-care
- Return patient to home and community
- Provide patient and family education
- Facilitate emotional adjustments to any life-style changes for patient and family
