

HOW TO: Complete AACN Courses

1. Log on to the OhioHealth University using your clock number
2. Select the AACN course from your **'My Courses'** page
3. Begin the first learning activity
4. On the last page of the learning activity, be sure to click on the **'Complete'** button to mark your lesson complete

Within this module we have discussed the concepts that are essential for assessment of patients with cardiovascular disorders, as well as implementation of nursing interventions when caring for this group of patients. Let's briefly review other key concepts presented in this module.

Knowledge of the anatomy and physiology of the cardiac structures is important in understanding cardiac disease processes. Knowledge of the difference between the electrical conduction of cardiac tissue and the mechanical action of cardiac tissue is

Lesson 4, Section C, Slide 25 of 26

JUMP TO TOPICS:

- Lesson 4 Invasive Procedures
 - Section A - Coronary Arteriography, Cardiac Catheterization, and Percutaneous Coronary Interventions (PCI)
 - Section B - Pacemakers
 - Section C - Cardiac Surgery

Module Summary

- Anatomy and physiology of cardiac structures
- Hemodynamics of the heart
- Preload, afterload, contractility
