- 4=Compdrug
- 5=Doctors Hospital
- 6=Nationwide Children's Hospital
- 7=Riverside Methodist Hospital

Elective Opportunities

- Maryhaven Womens Center
- Ohio Department of Rehabilitation and Correction
- Research

Curriculum

Block 1-3: Consult Team – Three blocks will be spent giving fellows an opportunity to familiarize themselves with the field of addiction via our consult team at Grant Medical Center. Fellows begin to understand continuum of care for patients struggling with substance use disorder involving co-occurring surgical/medical conditions, by evaluating patients receiving medication assisted therapy and adjusting treatment plans as necessary.

Block 4-5: Maryhaven Addiction Stabilization Center - Gain the exposure necessary for success in the field, with hands on experience in an acute withdrawal management facility. Fellows dive deeper into the realm of addiction by performing appropriate history, assessment and management of medication stabilization for multiple substance use disorders. They will also understand the role of an addiction medicine physician within an interdisciplinary team, admitting patients to appropriate levels of care on an individualized basis.

Block 6: Amethyst/Alvis - This rotation offers insight to the neurobiology of addiction and its impact on women's health. Upon completion, fellows will have the acquired skills and knowledge to perform intake assessments, and effectively manage addiction in pregnant and postpartum women withdrawing from alcohol, sedatives and opioids. Fellows will rotate with the maternal fetal medicine specialist to determine indications for referral to specialized intensive outpatient or residential services.

Block 7: Compdrug – Fellows prepare and lead educational sessions with other members of the opioid treatment program, demonstrating a commitment to carrying out professional responsibilities involving pharmacotherapy and adherence to ethical principles, including sensitivity and responsiveness to a diverse patient population.

Block 8: Pain Management - Fellows will properly assess patients with chronic pain via outpatient pain management at Doctors Hospital. By understanding options for patients with co-occurring substance abuse disorders, they will effectively manage possible side effects, utilizing multimodal approaches including both pharmacologic and non-pharmacologic treatments. By the end of this rotation, fellows will appropriately implement treatment plans that incorporate state and national guidelines for safe prescribing in an effective, patient-centered environment.

Block 9: Pediatrics/Adolescent Care – One block will be dedicated to Pediatric Addiction Medicine at Nationwide Children's Hospital, a facility widely recognized for its exceptional treatment in adolescent care. Fellows gain exposure to a local pediatric patient population impacted by substance use disorders. Responsibilities include assisting in newborn care as it relates to the evaluation and diagnosis of neonatal abstinence syndrome, and maintaining an attitude of compassion, patience and respect while navigating through challenging circumstances.

Block 10: Trauma/SBIRT – This rotation gives fellows exposure to patients following a traumatic injury via inpatient and outpatient settings at Grant Medical Center, ranked the busiest adult level one trauma center in central Ohio. Fellows will be able to understand patient chemical dependency, participate in trauma rounds which include pre-rounding with counselors and perform addiction consultations that identify intervention strategies to prevent additional injuries.

Block 11: Inpatient Psychiatry – Upon completion of this rotation, fellows are able to properly assess, educate, and inform patients of the risks involved regarding substance use with experience in intensive inpatient psychiatry at Riverside Methodist Hospital. Fellows will understand the importance of individualized treatment plans by taking into account psychiatric and medical co-morbidities, and managing acute behavioral disturbances in a safe and effective manner.

Block 12-13: Elective opportunities –

- 1) Maryhaven Women's Center
- 2) Ohio Department of Rehabilitation and Correction
- 3) Research
