Didactic Curriculum

The OhioHealth Doctors Hospital Emergency Medicine Residency Program utilize modern teaching methods that center on the learner and his/her needs. We steer away from traditional PowerPoint lectures focused on passive learning and instead engage in active learning with interactive discussions and skills sessions. Our curriculum incorporates a multi-modal learning approach utilizing the flipped-classroom model, simulation labs, and case-based learning. The curriculum is designed to provide the learner with a holistic view of emergency medicine in a dynamitic learning environment.
